

Supplementary Material

Enhanced bioavailability of a krill oil-based milk thistle extract formulation: *in vitro* and human studies

Supplementary Material 1: Listing of complete in- and exclusion criteria of clinical study

Inclusion criteria

- (1) Healthy males or females (1:1)
- (2) Age: 18 - 60 years
- (3) BMI: 19 to 30 kg/m²
- (4) Current Non-smoker
- (5) Participant is able and willing to sign the Informed Consent Form prior to screening evaluations
- (6) Participant is in good physical and mental health as established by medical history, vital signs, results of biochemistry, hematology
- (7) If applicable, stable intake of chronic medication of at least 4 weeks

Exclusion criteria

- (1) Relevant history or presence of any severe medical disorder, potentially interfering with this study (e.g. mal absorption, chronic gastro-intestinal diseases (colitis ulcerosa, Crohn's IBS, peptic ulcers, celiac disease), heavy depression, diabetes, heavy liver disease, immunodeficiency, pancreas insufficiency, acute cancers within last 3 years except basal cell carcinoma of the skin, etc.)
- (2) A significant CVD event within last 3 mo. incl. myocardial infarction, stroke, congestive heart failure
- (3) Regular intake of drugs or supplements possibly interfering with this study (e.g. milk thistle supplements, krill oil or fish oil products etc.) within 2 weeks prior to study start or during study
- (4) Chronic intake of substances affecting blood coagulation (e.g. acetylic acid, anticoagulants (e.g. Marcumar), diuretics, thiazides), which in the investigator's opinion would impact participant safety
- (5) General Safety & Laboratory exclusion criteria: Patients will be excluded from the study based on the following criteria:
 - Hemoglobin: < 11.0 g/dL (women); < 12.0 g/dL (men);
 - AST or ALT >3 x Upper Limit of Normal
- (6) Blood donation within 1 month prior to study start or during study
- (7) Participants with history of drug, alcohol or other substance abuse, or other factors limiting their ability to co-operate during the study
- (8) Pregnancy, breast feeding or intention to become pregnant during the study
- (9) Participation in another clinical study within the last 4 weeks and concurrent participation in another clinical study
- (10) A known allergy or hypersensitivity to any of the ingredients of the study products e.g. crustaceans and Asteraceae
- (11) Participants considered inappropriate for the study by investigators, including participants who are unable or unwilling to show compliance with the protocol

Supplementary Material 2: Technical Annex — LC–MS/MS Method Silybin

1. Instrumentation

LC system: Waters Acquity H-Class UPLC

Mass spectrometer: Waters Xevo TQS- μ Detector: Waters $e\lambda$ Diode Array Detector

Column manager: Waters Acquity CM, 30 °C

Autosampler: Waters Acquity FTN

Column: Acquity UPLC BEH C18, 1.7 μ m

2. LC Conditions

Flow rate: 0.30 mL/min

Injection volume: 1 μ L

Column temperature: 30 °C

Mobile phases

A: Water + 0.1% formic acid

B: Acetonitrile + 0.1% formic acid

C: Methanol (not used)

D: Isopropanol (not used)

Gradient

Time (min)	Flow (mL/min)	%A	%B	%C	%D
0.00	0.300	75	25	0	0
3.00	0.300	25	75	0	0
6.00	0.300	25	75	0	0
6.60	0.300	75	25	0	0
9.00	0.300	75	25	0	0

Mass Spectrometry Conditions**Ionization mode:** ESI negative**Functions acquired:**

- **Function 1:** MRM
- **Function 2:** MS/MS full scan
- **Function 3:** PDA (UV)

Source and Gas Settings (Function 1 & 2)

Parameter	Value
Capillary voltage	2.21 kV
Cone voltage (global)	20 V
Source temperature	150 °C
Desolvation temperature	550 °C
Cone gas flow	20 L/h
Desolvation gas flow	850 L/h

Table S1: MRM settings of the final ESI+-MS/MS method.

Analyte	Parent ion (m/z)	Daughter ion (m/z)	Cone voltage [V]	Collision energy [V]	Ion transition type
Silybin	481	125	58	26	Q
Silybin	481	152	55	38	q
Silybin	481	301	31	16	q
Naringenin	271	151	20	18	Q
Naringenin	271	119	20	24	q

Q: Quantifier ion transition, q: qualifier ion transition
